Huntrify — Platform Brief

For Developer / Tech Stack Decision · Web App Scope Only — Public Website Excluded

Overview

Huntrify is an AI-powered freelancing and hiring platform unifying freelancers, job seekers, clients, agencies, and hiring partners on a single ecosystem. India-first launch, targeting 15M+ freelancers, with global expansion planned.

User Types (5 User-Side Dashboards)

- Freelancer
- Job Seeker
- Client
- Agency
- Hiring Partner

AI Systems (5)

- **Matchmaking** — 0–100% compatibility scoring between users
- **Skill gap detection** — not just free YouTube learning suggestions; a different/more advanced approach (detail to be finalized)
- **Fraud detection** — see verification flow below
- **Behavior-learning AI** — improves matching accuracy over time based on user behavior
- **AI chat assistant** — platform-wide assistant for users

Fraud Prevention & Identity Verification (4-Layer)

- Layer 1 — Basic signup
- Layer 2 — Profile + government ID submission
- Layer 3 — Live selfie facial match
- Layer 4 — AI live video test with dynamic, niche-specific questions + lip-sync monitoring (catches proxy/fake profiles)

Failure flow: Up to 3 retry attempts with 12–24 hr cooldowns between attempts → account suspension after exhausting retries → user can appeal via support ticket for manual video review.

AI Interview Module (related, separate spec): failure-path handling, DPDP Act compliance (consent API, data retention), client-side face detection via face-api.js or MediaPipe (cost control), configurable scoring weightage, session abandonment handling.

Core Platform Features

- Instagram-style social feed
- Real-time notifications — WhatsApp + email

- **Tools Hub** (role-specific): proposal/portfolio tools (Freelancer) · project management (Client) · team/analytics dashboard (Agency) · applicant tracking + campaigns (Hiring Partner)
- **Quick commerce / Quick booking for services** — instant booking of a fixed service directly from a provider (same as "Quick commerce management" in admin panel)

Monetization — Launch Model (Final)

- Subscription: Free tier — 12–15% commission
- Subscription: Paid tier — 4–5% commission, ■999/month (India)
- Job ad campaigns / boost posts — Meta-style ad system
- Project commission
- Enterprise direct — future phase

Note: Connects/tokens (pay-to-apply model) is intentionally excluded from launch scope — to avoid adding friction during the cold-start / early-trust phase. May be revisited post-launch once user base and trust are established.

Admin Dashboard (11 Modules)

1.	Main dashboard
2.	Payment management
3.	Support
4.	Notification center
5.	WhatsApp broadcast + direct chat
6.	Security & verification
7.	Job/Project management
8.	AI control panel + Tools Hub management
9.	Quick commerce management (= quick booking for services)
10.	Logs & monitoring
11.	Users management

Documentation Already Prepared

- 29-page full platform specification — all 5 user types, every screen, dashboard, and system state
- Full technical build brief — covers all AI systems, verification flows, and unresolved tech decisions (backend framework, database, auth provider, payment gateway, facial recognition vendor — need dev input to finalize)
- AI Interview Module spec — DPDP compliance, client-side face detection, scoring weightage, session abandonment handling
